

National Resource Management SERVICES

NRM Brings Maximum Value to Your Lighting Investment

As part of our Total Solution Package, National Resource Management offers customers lighting design and implementation services.

New Construction

Our resident team has worked with architects and store designers to create complete lighting systems that are energy efficient, cost effective and architecturally pleasing.

NRM's team works within the parameters of various state and national recognized energy codes as well as various utility rebate programs to maximize the value of your lighting investment.

Renovation of Existing Facilities

NRM is happy to work in your existing facilities too, where we will review your current lighting and recommend improvements in efficiencies and appearance. NRM can offer pure design on a competitive fee basis, supply the recommended materials with the design fee incorporated in the cost for your electrical contractor to install, or we can do a complete project from conception to implementation.

NRM's lighting references include a major New England food marketer, the design team of a major regional independent grocery wholesaler, and several independent grocers with one or more locations.
