

# REMOTE SITE MANAGER™

Comprehensive equipment supervision  
and real-time performance metrics

## You've never been this in-tune with your walk-in cooler, freezer, cold room, or refrigerated warehouse.

Remote Site Manager™ was designed to do one thing remarkably well: deliver round-the-clock peace of mind. **Never worry about what you might be walking into on Monday morning again.**

Scalable, adaptive, and cloud-based, RSM is the best option to monitor the operation of your critical refrigeration equipment.

The RSM platform delivers real-time helpful information, including a live summary page, key performance indicators, and a large cache of timely performance-related alerts (covering a range of crucial information from temperatures falling out of range, to doors being left open, to compressor short cycling), as well as unique visual diagnostics that allow you to pinpoint exactly when and where an issue occurred.

Regardless of your position in the cold chain, RSM can improve your ability to adhere to food safety regulations, prove energy savings, or supply critical temperature data to the customers who rely on you.

### *Who is RSM perfect for?*

- Facilities Managers
- Operations Managers
- Wholesalers
- Distributors
- Utility Program Managers
- ESCO Professionals
- Chain Franchise Owners
- Biotech/Biopharma Labs
- HVACR Service Technicians
- M+V Auditors
- Commissioning Agents
- Owners & Operators

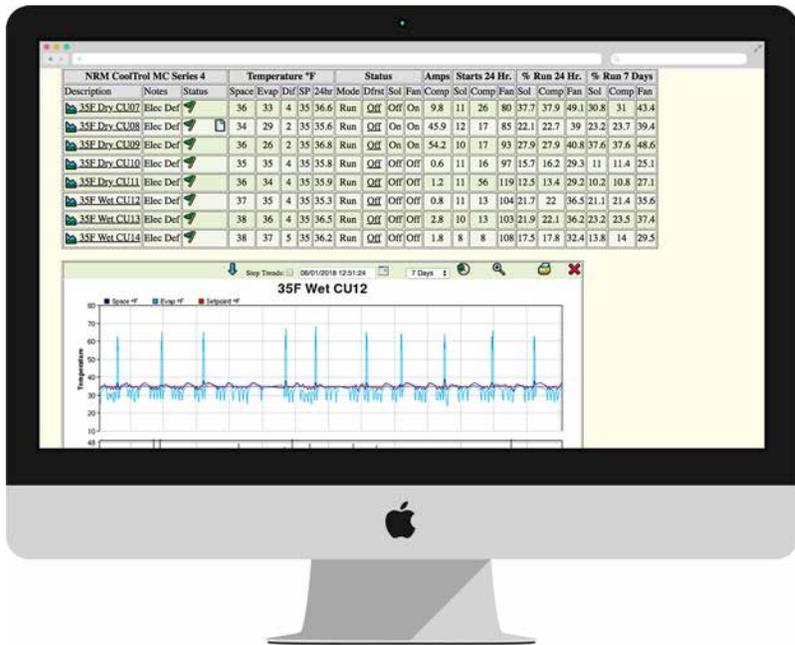

**REAL-TIME  
PERFORMANCE  
METRICS**

**TIMELY  
EQUIPMENT  
ALERTS**

**PEACE-OF-MIND  
FROM  
ANYWHERE**

## REMOTE SITE MANAGER™ DELIVERS UNMATCHED INSIGHT WHEN YOU NEED IT

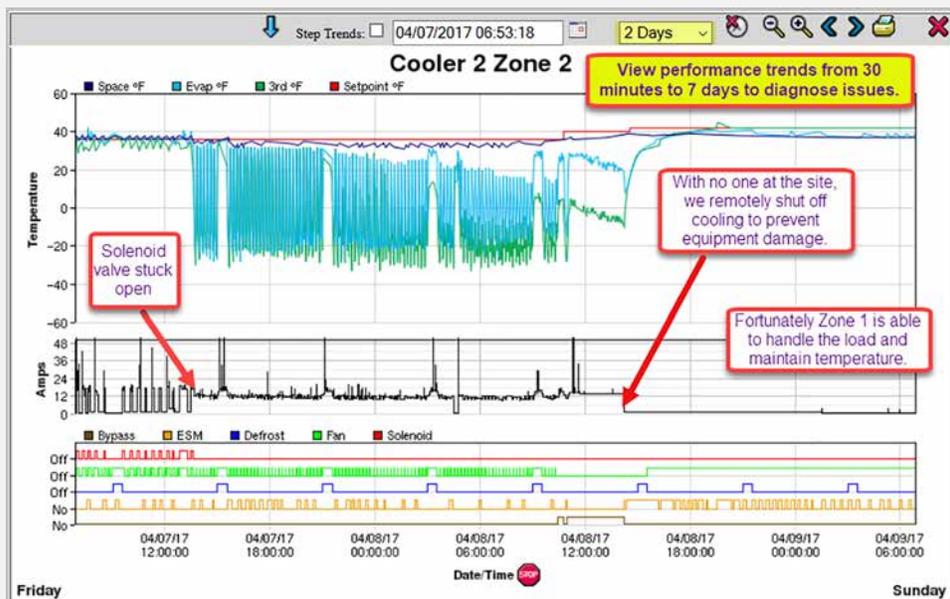

- >> Real-Time Summary Page
- >> From 24-hr. to 7-day Averages
- >> 12+ Operation/Performance Alerts
- >> Cloud-based & Mobile Accessible
- >> Unique Visual Diagnostics & Trends
- >> Historical Operational Data
- >> Remote Access to Settings, Defrost, & System Bypass
- >> Automated Temperature Tracking & Logging

“ I utilize the monitoring dashboard every single day. Because of the types of pharmaceutical compounds we store, we have redundant cooling systems in our coolers and freezers. So if we didn't have RSM monitoring the equipment itself, we wouldn't know if there's an issue because the space temperatures requirements would still be satisfied. RSM allows me to catch mechanical issues early, before we have a \$30 million mistake.”

— Shawn Clarke, EH&S  
Thermo Fisher Scientific

“ Before we purchased RSM, it was literally a full-time job manually checking the temperatures of all of our refrigeration. We have five trailers, a blast freezer, a utility freezer, and a walk-in cooler. With RSM, I can simply check my iPad and have all of that information at my fingertips 24 hours a day, anywhere I am. I love the system and would highly recommend it.”

— Rick Robbins, Owner  
Pittsfield Rye Bakery

## ENSURE YOUR SAVINGS ARE ACTUALIZED

Integrating CoolTrol® into your daily operations was the first step toward long-term, impactful savings. Pairing Remote Site Manager™ with your new controls is the second. If there are undetected operational issues with your refrigeration system, such as with the compressor, it will negatively impact CoolTrol®'s ability to operate your cooling efficiently. RSM provides the visibility into what's going on “behind the scenes.”
